A comfortable cap made from high-quality mesh material with a self-fabric binding around and tri-glaze buckle.

Printing Technique : Digital Transfer, Embroidery, Screen Transfer

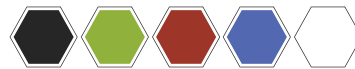

Miri HK0316

Sports Cap

Stylish sports cap made from polyester with a buckle at the back for a snug fit.

Printing Technique : Screen Printing, Digital Transfer, Embroidery, Screen Transfer

Elio HK0315

Flexi Fit Cap

High-quality cap made from quick dry material that keeps you cool. It comes without any closure.

Printing Technique : Screen Printing, Digital Transfer, Embroidery, Screen Transfer

Cyrus HK0317

Brush Cotton Cap

Regular fit cap made from breathable brush cotton with an adjustable buckle at the back.

Printing Technique : Screen Printing, Digital Transfer, Embroidery, Screen Transfer

Solieil HK0314

Base Ball Cap

High-quality cap made from polyester material that keeps you cool. It comes without any closure.

Printing Technique : Screen Printing, Digital Transfer, Embroidery, Screen Transfer

Versatile and effectual, t-shirts will provide a stylish means to an otherwise corporate eco-system. These high-quality t-shirts can be entirely custom-made as per the needs making them a popular choice across the spectrum.

Polo T-shirt

High-quality and comfortable polo-neck t-shirts with short sleeves. Fully customisable and come in three material options - mesh, dri fit & cotton.

Printing Technique : Screen Printing, Digital Transfer, Embroidery

Round-neck T-shirt

High-quality and comfortable round-neck t-shirts with short sleeves. Fully customisable and come in three material options - mesh, dri fit & cotton.

Printing Technique : Screen Printing, Digital Transfer, Embroidery

Customised Aprons

Choose your style
Materials available: Cotton, Mesh Fabric

Customised Pouches

Custom-made with pocket and zipper
Materials available: Cotton, Jute & Canvas

Customised Industrial Uniform

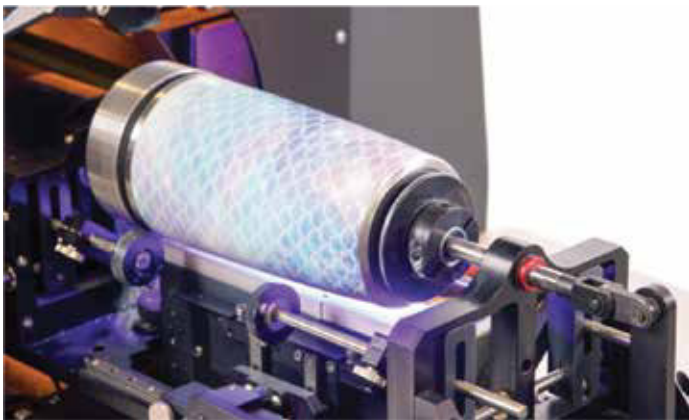

Choose your style, colour and material

Customised Scarves

Choose your style
Materials available: Satin, Minimitt, Mesh Fabric, Poly Cotton

Printing Technique

360 UV Printing

This innovative printing technique combines versatility with efficiency, making it a go-to choice for detailed, eye-catching customisation. 360 UV printing is a cutting-edge technology that allows for full-colour, high-resolution prints on cylindrical objects, ensuring complete wraparound coverage. Utilizing ultraviolet (UV) light to cure the ink instantly, this method delivers vibrant, durable prints that resist fading and wear.

D-embossing

D-embossing is a stamping process for producing raised or sunken designs or reliefs in sheet metal. The process can be made by means of matched male and female roller dyes. Using the dye along the logo to be D-embossed can have a sunken or raised outcome on PU or leather material.

Sublimation

Sublimation is a revolutionary printing technique that creates vibrant, full-colour designs by transferring ink into the fabric or substrate using heat and pressure. Unlike traditional methods, sublimation involves turning solid dye directly into a gas, which then embeds itself into the material, ensuring a permanent, high-quality print.

UV Printing

UV printing is a form of digital printing that uses ultraviolet lights to dry or cure ink as it is printed. As the printer distributes ink on the surface of a material (called a substrate) specially designed UV lights follow close behind, curing or drying - the ink instantly.

DTF

Direct-to-film (DTF) printing is an innovative textile printing method that allows for high-quality, detailed designs to be transferred onto fabrics. Unlike traditional printing techniques, DTF printing involves printing designs onto a special film, which is then transferred to the fabric using heat and adhesive powder.

Epoxy

Epoxy coating is a robust and versatile protective layer applied to various surfaces, including metals, plastics, and wood. This durable finish is created by mixing epoxy resin with a hardener, which then cures into a tough, resilient coating. Epoxy coatings provide exceptional resistance to scratches, chemicals, and environmental conditions.

Embroidery

Embroidery is the craft of decorating fabric or other materials using a needle to apply thread or yarn. Embroidery may also incorporate other materials such as pearls, beads, quills and sequins. Embroidery is available with a wide variety of thread or yarn colour.

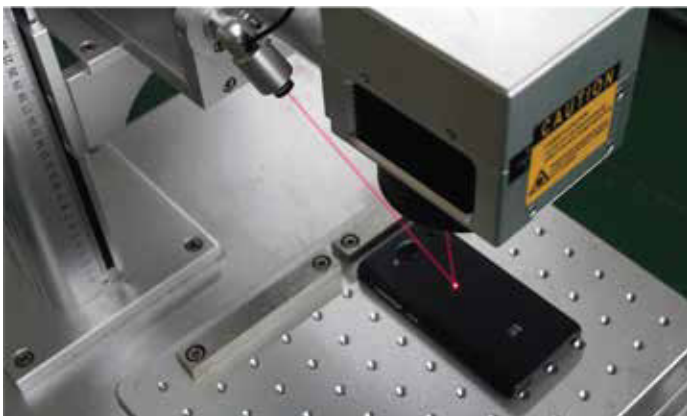

Heat Transfer

Heat Transfer printing includes vinyl heat transfer and digital heat transfer. With the vinyl heat transfer process, a machine is used to cut out designs and letters in pieces of coloured vinyl. A heat press is then used to transfer each vinyl colour of the design onto the object being printed.

Laser Engraving

Laser engraving, which is a subset of laser marking, is the practice of using lasers to engrave an object. Laser marking, on the other hand, is a broader category.

Laser Marking

Laser marking on the other hand is a broader category of methods to leave marks on an object. The technique does not involve the use of inks, nor does it involve tool bits which contact the engraving surface and wear out, giving it an advantage over alternative engraving or marking technologies where inks or bit heads have to be replaced regularly.

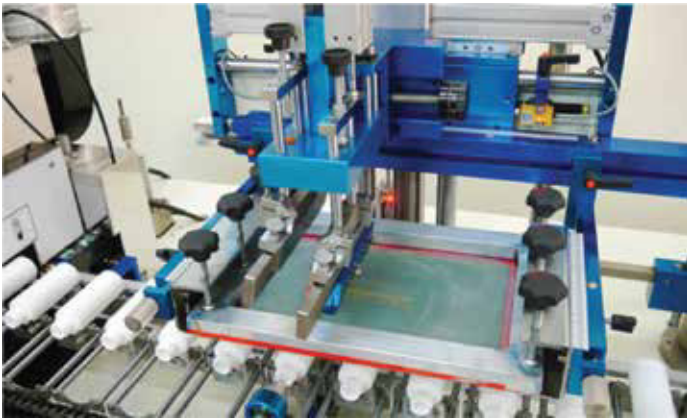

Pad Printing

Pad printing is a printing process that can transfer a 2-D image onto a 3-D object. This is accomplished using an indirect offset printing process that involves an image being transferred from the cliché via a silicone pad onto a substrate.

Print & Cut

Die-cutting is the process of cutting your printed stickers into the desired shape. Many printing companies only offer standard cut shapes, like rectangles or circles. Any shape can be die-cut using our print & cut machine.

Round Screen Printing

Round screen printing is a specialized technique designed for printing on cylindrical or curved surfaces, such as bottles, mugs, and tubes. This method involves using a rotating screen and a squeegee to apply ink evenly around the object, creating a seamless, wraparound design. Known for its durability and vibrant colours.

Screen Printing

Screen printing is a printing technique whereby a mesh is used to transfer ink onto a substrate, except in areas made impermeable to the ink by a blocking stencil. A blade or squeegee is moved across the screen to fill the open mesh apertures with ink, and a reverse stroke then causes the screen to touch the substrate momentarily along a line of contact.
